

Project Architect

RESPONSIBILITIES

- Works in constant communication with SLR's design team principals while leading a team of outside consultants to produce project documentation for multifamily and mixed-use projects. The project team may include internal and external production resources.
- Coordinates project definition through design development and construction documentation with SLR design, development, construction, and operations coworkers to achieve the best outcomes in project design, budget, schedule, and financial performance.
- Represents the project's design team through construction administration.
- Assists in the development of site studies and due diligence activities of potential Streetlights Residential development opportunities.
- Creates tabulations that track project metrics including the net rentable square footage, unit counts, and parking counts of multifamily projects as required by finance, operations, and construction coworkers.
- Prepares materials for investment committee presentations and internal monthly or quarterly meetings
- At project milestones, organizes materials for the appropriate SLR team members for input, quality control and approvals

REQUIREMENTS

- Licensed architect with 5 or more years of experience within the multifamily, mixed-use or hospitality industry and as a member of a design team.
- A team player who possesses a positive attitude, strong work ethic, and a high level of professionalism.
- Possess strong communication and organizational skills.
- Proficient in AutoCAD and Microsoft Excel
- Proficiency in AutoDesk Revit, Trimble SketchUp, Adobe InDesign, and/or Lumion preferred but not required.
